DigitalLINK specializes in color & black and white digital duplicating. **DigitalLINK** utilizes the latest technology available today. It is our goal to blend this technology with good old fashioned personal service. Whether we create a web interface for on-going document management or we conduct business on a per job basis, we strive to exceed your expectations. DL can receive your information via e-mail, our FTP site or a delivery service. When DL receives the information it is assigned to an account representative who will follow the job throughout the entire production process to ensure quality control and fast turnaround.

Print on Demand and document management go hand in hand. We can set up a web based interface to manage the printing of your documents. This process starts at the creative phase and continues through the production period right to the fulfillment and distribution stage.

Imagine sitting at your desk, in the office, at home or in the field and you or your staff can access information to be printed and delivered on demand.

We are your **DigitalLINK** to our complete 110,000 square foot printing, mailing, fulfillment and distribution facility.

We utilize **Xerox DocuTechs** and laser printers for printing manuals, training documents, marketing materials and personalized or variable data applications.

We use the **Oce Digital Webs** for larger jobs or large mailings requiring personalization.

DigitalLINK can receive both PC and Mac files. We have all of the common software including Quark, Pagemaker, Photoshop, CorelDraw, PDF's, Word, Powerpoint and more!
